PROFESSIONAL EXPERIENCE

Amazon Web Services, *ADC Engineer II*

06/2022 – Present
Arlington, VA

- Support and troubleshoot core VPC networking services across 6 isolated regions spanning 3 air-gapped partitions; contributed to the launch buildout for 3 of those regions by sequencing interdependent components through CI/CD pipelines.
- Operate 100+ CI/CD pipelines; troubleshoot and adapt Python and Java Lambda functions to resolve partition-specific compatibility issues — SSL/TLS certificate chains and environment-specific config generation.
- Handle 20 to 50 pages per week during on-call rotations, including after-hours high severity incidents requiring on-site response; live-debug via logs and metric analysis to drive root cause.
- Cut recurring alarm noise by tracing issues back to root cause — code bugs, missing dependencies, or thresholds that need tuning for lower-traffic environments.
- Diagnose service issues rooted in air-gapped constraints — no internet egress that breaks pip installs and external API calls, certificate requirements for calls to external services, and multi-round security review for low-side to high-side artifact transfers.
- Coordinate daily with engineers across dependent service teams to unblock deployment failures, negotiate sequencing, and close service-parity gaps by bringing dependent AWS services into region or adapting them to air-gap limitations.
- Designed and built an internal backup service end-to-end in CDK, protecting multiple hosts across multiple regions from data loss during maintenance and unplanned host transitions; reducing recovery time from 1+ hours to <10 seconds. Deployed with full CloudWatch monitoring across all components.
- Mentor and onboard peers on a team of ~10 engineers — walk new hires through internal resources and coach teammates on skill and career progression.

NCI Information Systems, Inc., *IT Support Specialist*

07/2020 – 06/2022
Arlington, VA

- Provided expedited IT support to dozens of senior Department of Defense officials, meeting rapid-turnaround SLAs while closing 100+ tickets per month as top resolver.
- Developed PowerShell and Batch scripts to automate recurring tasks, cutting certain task time by 75% and eliminating 1+ hours of after-hours support.
- Assisted Microsoft 365 migration by verifying Azure AD identity provisioning to prevent customer service lapse.

United States Army Reserve, *Information Technology Specialist*

03/2018 – 03/2022
Fort Detrick, MD

- Administered LAN/WAN and full network stacks on Cisco routing and switching hardware; diagnosed hardware, software, power, and communications failures while maintaining 99% uptime.
- Established field connectivity to the internet and partner networks during annual training exercises, keeping 3 Army companies linked to remote sites for mission operations.

22nd Century Technologies, *Deployment Team Lead*

08/2019 – 07/2020
Arlington, VA

- Led a team of 5 to prepare, deploy, and maintain end-user devices; set service policies that drove consistent ticket resolution.
- Maintained an audit-quality asset database; imaged hundreds of new devices and sanitized end-of-life hardware.

PROJECTS & EDUCATION

Northern Virginia Community College, *Computer Science, A.S.*

01/2020

Simple Metro, *github.com/alexr-co/simple-metro*

Real-time WMATA arrivals board at metro.alexr-co.com , built as a friendlier alternative to the official app for myself and coworkers. React and TypeScript on Firebase Hosting with a Cloudflare Worker and Durable Object caching one shared snapshot across all users, holding upstream API load at ~9,000 calls per day.

alexr-co.com, *github.com/alexr-co/alexr-co.com*

Personal portfolio in Astro. GitHub Actions deploys to Firebase Hosting via GCP Workload Identity Federation using OIDC and no service-account keys; Cloudflare handles DNS and cookieless analytics.
